

Hannah Lyons

Richmond, VA | Portfolio: <https://hannahl8.github.io> | LinkedIn: <https://linkedin.com/in/hannah-lyons-l8>

EDUCATION

Master of Engineering in Computer Science with a concentration in Software Development and Applications

- Virginia Polytechnic Institute and State University | Graduated: August 2024 | GPA: 4.0

Bachelor of Science in Biochemistry with Minors in Computer Science and Chemistry

- Virginia Polytechnic Institute and State University | Graduated: May 2021 | GPA: 3.75

TECHNICAL SKILLS

Front-End: React, TypeScript, Vite, JavaScript (ES6+), HTML5, CSS3, Figma

Back-End: Java (Spring Boot, Jakarta EE), Python (Django), RESTful API development

Cloud & DevOps: AWS (EKS, Fargate, Secrets Manager), Azure, Docker, GitOps, Terragrunt, CI/CD

Mobile: Swift (iOS), Kotlin (Android)

Tools & Practices: Git, GitLab, Jira, Agile/Scrum, OAuth2 (Microsoft Entra), API security

TECHNICAL WORK EXPERIENCE

Software Engineer II | Estes Express Lines | July 2025 – Present

Richmond, VA

- Selected in October 2026 for the Agentic Development Life Cycle (ADLC) proof-of-concept team, building a new application from scratch without an IDE by orchestrating AI agents with GCP Scion.
- Define intent, constraints, and acceptance criteria and review agent output for quality and security; help interview new ADLC engineers and bring agentic practices back to legacy applications.
- Owned end-to-end delivery in an Agile SDLC, managing GitOps/Terragrunt workflows and CI/CD pipelines across DEV, UAT, and PROD, while mentoring new engineers through onboarding guides and weekly support sessions.
- Drove backend enhancements across document management and image ingestion services using REST APIs, OAuth2 (Microsoft Entra), Kong ingress, and AWS Secrets Manager.
- Improved system scalability and stability through JMeter testing, memory-leak remediation, and SSL/truststore debugging in containerized environments.
- Led large-scale modernization of legacy Java systems by architecting and executing migrations from JBoss/Java 11 to Spring Boot/Java 21, resolving servlet lifecycles, caching, and complex third-party dependency constraints.
- Led infrastructure upgrades for AWS-hosted applications on EKS/Fargate, addressing Terraform deprecations, executing rolling upgrades, and validating production readiness across environments.

Software Engineer | Naval Surface Warfare Center | June 2020 – May 2025

Indian Head, MD & Dahlgren, VA

- Worked in Agile Scrum teams using Git and Jira; mentored junior developers.
- Designed and maintained Java-based software applications and plugins across multiple mission-critical projects and divisions.
- Served as Technical Lead for a Java plugin integrated into an external agency's production system, owning architecture, development, and delivery.
- Built Python automation pipelines to execute large-scale application runs and collect datasets supporting machine learning model development.
- Collaborated cross-agency with Los Alamos National Laboratory (LANL) on model integration and system interoperability.
- Supported high-priority, short-duration initiatives by delivering Modeling & Simulation and software engineering support to senior leadership.

CERTIFICATIONS AND SOCIETIES

Microsoft AZ-900 Certification | Obtained July 2024

Agile Leadership Certification | Obtained June 2022

Member of the Mu of Virginia Chapter of Phi Beta Kappa Academic Honors Society | Joined May 2021
